PORTALS & COLLABORATION

As a Gold Microsoft Partner in Portals and Collaboration area, SAFIRA sells, develops, and deploys solutions for almost any business need, providing customers with innovative collaboration and Internet solutions based on the SharePoint 2010 platform. SAFIRA has been implementing and developing solutions using SharePoint technology since 2005 and counts with one of the most experienced and certified teams in the market.

ABOUT SAFIRA

SAFIRA develops solutions and provides IT services to leading companies in the national and international market. We provide engineering services to advise, audit, architect, conceive and manage IT systems that support the companies' business. Founded in 1997, SAFIRA has more than 50 active customers and a team of 120 highly qualified professionals.

SharePoint 2010 is the business collaboration platform for the Enterprise and the Internet. When people need to work with other people, with content and information, or with line-of-business data, they can use the rich, out-of-the-box set of integrated capabilities in the SharePoint 2010 platform. People can also customize these capabilities to address specific business needs and integrate them with other products and solutions. Using the same set of capabilities and tools, companies can deploy SharePoint 2010 both inside the enterprise (that is, intranets) and outside of the firewall (that is, extranets, the Internet) so employees, customers, and business partners can work with the platform.

Capability Areas

SharePoint 2010 helps people work together in new and effective ways with a rich set of six integrated capabilities areas. Using SharePoint, it's easy to set up Web sites to share information with others, manage documents from start to finish, and publish reports to help everyone make better decisions.

SAFIRA brings a unique combination of talent, experience and methodology to ensure the complete alignment between the technology and the customer's business needs. Its services include planning, architecture, design, development, training, implementation and change management of any system based on SharePoint 2010.

SharePoint 2010 helps companies:

- > Deliver the best productivity experience by letting people work together in ways that are most effective for them. Whether through the PC, browser, or mobile device, SharePoint 2010 offers an intuitive and familiar user experience. These capabilities are significantly enhanced by the way SharePoint 2010 and Microsoft Office® 2010 work together, letting people increase productivity while using familiar products and tools
- > Cut costs with a unified infrastructure that offers enterprise-scale manageability and availability. Whether companies deploy the platform on-premises or as hosted services, SharePoint 2010 lowers the total cost of ownership by offering an integrated set of features and by helping companies consolidate their business-productivity solutions on top of SharePoint Server. Companies can then reduce costs related to maintenance, training, and infrastructure management
- > Rapidly respond to business needs with dynamic and easily deployed solutions. SharePoint 2010 offers the tools and capabilities for end users, advanced users, and professional developers to design and create business solutions that can be integrated with existing company data, tools, and processes
